## About

I am a driven Software Engineering undergraduate at UET Peshawar with a passion for building innovative software and turning ideas into real-world solutions. With hands-on experience in full-stack web development, mobile app development, APIs, databases, and software engineering, I enjoy taking projects from concept to implementation. My experience includes an internship at PEDO and the development of Rahi, a tourism-focused mobile application created to help people discover remarkable destinations across Pakistan. I am a creative problem solver, fast learner, and collaborative team player who enjoys learning new technologies, debugging challenging problems, and working under deadlines. My ambition is to grow into an AI Engineer and contribute to intelligent, impactful technology.
